

MARKED-UP VERSION OF CLAIMS

TECH CENTER 1600/2900 A[n] purified endonuclease enzyme which is secreted from 1. (Amended) [immune] a human B lymphoblastic IM9 cell line or a 12-tetradecanoylphorbol 13-acetatetreated U937 cell line and recognizes bacterial DNA as a foreign agent and processes [it] the DNA to produce about 10 bp single-stranded [oligonucleotide] oligonucleotides including a CpG motif which is involved in immune response.

The endonuclease enzyme according to claim 1, [having a 3. (Twice Amended) molecular weight of approximately 72.4 kD by SDS-PAGE] which has the following physiochemical properties:

a) molecular weight: about 72.4 kD by SDS-PAGE;

b) divalent cation dependency: Mg²⁺ dependent; and

c) optimal pH: about 6.5 to 7.5.

The endonuclease enzyme according to claim 1, wherein the (Amended) mobility distance of the enzyme activity by native-PAGE is apparently distinct from that of [Dnase I] <u>DNase I</u>.
